

Sustainability, Certified.

The first environmental certification on recycled material content, accredited and valid at an international level.

The First Step toward a Circular Future.

RESPONSIBILITY

We have a responsibility to leave future generations a better world than the one we live in.

A world where resources—raw materials, energy, water—are accessible treasures for everyone, not sources of conflict.

A background image of wood chips or mulch, with a vertical green line on the left side.

**Produce
more
efficiently,
consume
more
carefully.**

REUSE, REDUCE, RECYCLE

Building a **circular economy model** is part of the **UN's 2030 Agenda goals**, based on basic yet powerful principles: reduce, recycle, recover.

This means that today, everyone—**individuals, companies, and public administrations**—must commit to consuming fewer resources.

A background image of a dense forest of evergreen trees, with a misty or foggy atmosphere.

A Guarantee for Those Who Care about the Environment.

More and more companies are claiming their materials or products are "**recycled**" and "**sustainable**".

BUT HOW CAN YOU BE SURE THEY REALLY ARE?

Only products whose recycled content is **certified** can truly say—transparently—that they save resources.

The ReMade Foundation supports companies that want to highlight their contribution to the circular economy through its ReMade and ReMade in Italy certifications.

ReMade is the first scheme that certifies recycled and/or manufacturing by-product content, accredited and valid at an international level.

CERTIFIED RECYCLING FROM A TO Z

The certification process traces the journey of discarded items, showing how waste becomes secondary raw material and then a new product.

The entire production process is followed, certifying every step, for single-material and multi-material products.

What is ReMade

ReMade is the first product certification accredited for verifying recycled material and/or by-product content and valid at and international level.

APPLICATION

WHICH PRODUCTS CAN BE CERTIFIED?

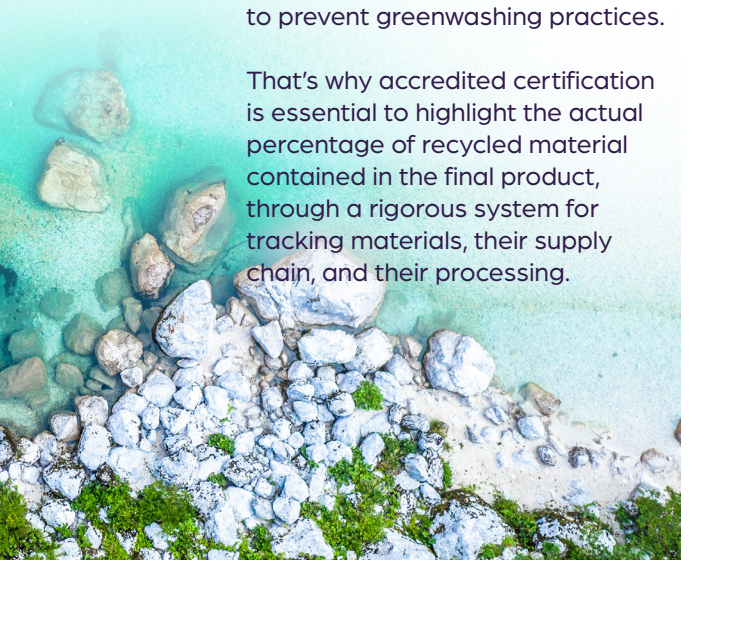

ReMade certification can certify products or materials from any sector (construction, clothing, design, packaging), even multi-material, as long as they are made from recycled materials and by-products.

RECYCLED PRODUCTS

WHY CERTIFY RECYCLED PRODUCTS?

In many cases, simply claiming that a product is “recycled” to some extent is not enough. Consumers, companies, and public administrations need transparency regarding the sustainability characteristics of products, in order to prevent greenwashing practices.

That’s why accredited certification is essential to highlight the actual percentage of recycled material contained in the final product, through a rigorous system for tracking materials, their supply chain, and their processing.

THE REMADE CERTIFICATION

What are the Advantages?

Not only does it provide competitive advantages, but it is a prerequisite for accessing exclusive business opportunities.

The Certification is undeniable proof of **transparency for clients and consumers** who want to choose truly circular products.

It is essential for participating in **Public Administration tenders**, as it is explicitly recognized in the Minimum Environmental Criteria (**MEC**) of Green Public Procurement (**GPP**) legislation.

It is also a fundamental requirement for accessing **incentives and tax breaks**.

**Doing good
isn't enough,
it must be
certified and
let people
know.**

THE CATALOGUE

FOR SIMPLIFIED SEARCHES

ReMade connects certified companies committed to collective efforts for environmentally friendly communication.

Companies and their certified products are listed in a **continuously updated digital Catalogue**, available on the Foundation's website, organized by industry. Here, purchasing departments of private companies and public administrations can find references for the certified products and materials they are interested in.

It's an important visibility opportunity for certified producers, transparency for the certification scheme, and correct information for citizens.

The image is a vertical composition. The left half features a close-up of white cotton fibers, showing their fine, tangled texture. The right half shows cotton bolls on a brown branch, with some bolls in sharp focus and others blurred in the background. A solid green vertical line separates the two halves, positioned to the left of the text on the right side.

THE REMADE CERTIFICATION

How is it Obtained?

Only products made entirely or partially from materials derived from waste recycling or by-products can receive ReMade Certification.

PRELIMINARY PHASE INFORMATION

The ReMade Foundation can provide companies with preliminary information on the certification process through the **Technical Standards** available online.

THE VERIFICATION DOCUMENTATION AND AUDIT

Checks are conducted by an accredited third-party **Conformity Assessment Body**, contacted directly by the company or via the Foundation. These include specific documentation checks and an on-site visit by the appointed auditor at the production facility.

Sometimes support from a ReMade-qualified **Consultant** can be helpful in preparing the necessary steps for the control process.

THE OUTPUT THE LABEL

Once certification is obtained, you can display a label proving the result. Highlighted are the percentages of recycled materials and/or reused by-products, along with analyses by the ReMade Foundation on reductions in energy consumption and climate-altering emissions resulting from recycling.

The ReMade certification scheme is overseen by **ACCREDIA**, Italy's sole accreditation body for certifiers, monitoring the professionalism, competence, and specific training of entities and auditors who perform checks and issue Certification.

THE LABEL

How can you Use it?

It's a recognized proof of the product's circular value in the eyes of clients and consumers.

It is available in various formats to suit different uses: **Extended** form as an attachment to technical documentation; **Compact** form, for websites or company brochures; **Essential** form, to affix on the product or its packaging.

NOT SUBJECT TO CERTIFICATION

Reduction of energy consumption resulting from recycling	00,00 kmh/kg
-------------------------------------------------------------	-----------------

Reduction of climate-altering emissions resulting from recycling	00,00 kg CO ₂ eq/kg
---------------------------------------------------------------------	-----------------------------------

CONFORMITY
ASSESSMENT BODY

www.remade.it

THE CERTIFICATION PROCESS

What is Evaluated?

The central aspect is setting up a traceability model for material flows in the production process, transparency in operations, and relevant documentation.

REQUIREMENTS

MATERIALS, FLOWS, PEOPLE

Among requirements, the company must prepare a technical datasheet, constantly updated, clearly showing the components and their weight percentage, indicating those coming from recycling or by-products.

Each certified product must have a traceability report for its production system, including all material inputs, all operations performed, the process, and all material outputs.

Additionally, the company must appoint a responsible person for conformity to ReMade's Technical Standards, and all personnel involved in the certified process must be aware of their role.

SUMMARY

4 CATEGORIES

Based on compliance with all requirements, a percentage of recycled, recovered, and by-products content leads the product to one of these categories:

Over 90% _____ **A+**

60–90% _____ **A**

30–60% _____ **B**

Below 30% _____ **C**

In 2024, by decision of CONAI, the ReMade Foundation is established, building on the experience of ReMade in Italy Association and its many member businesses.

ALONGSIDE COMPANIES AND THE PA

The ReMade Foundation

FOR COMPANIES

The Foundation supports manufacturers seeking product certification by providing all useful information on the process and possible participation in public tenders, as well as later consulting on communicating certified products.

FOR PUBLIC ADMINISTRATION

It also assists public administrations in applying Green Public Procurement (GPP) regulations through personalized action plans.

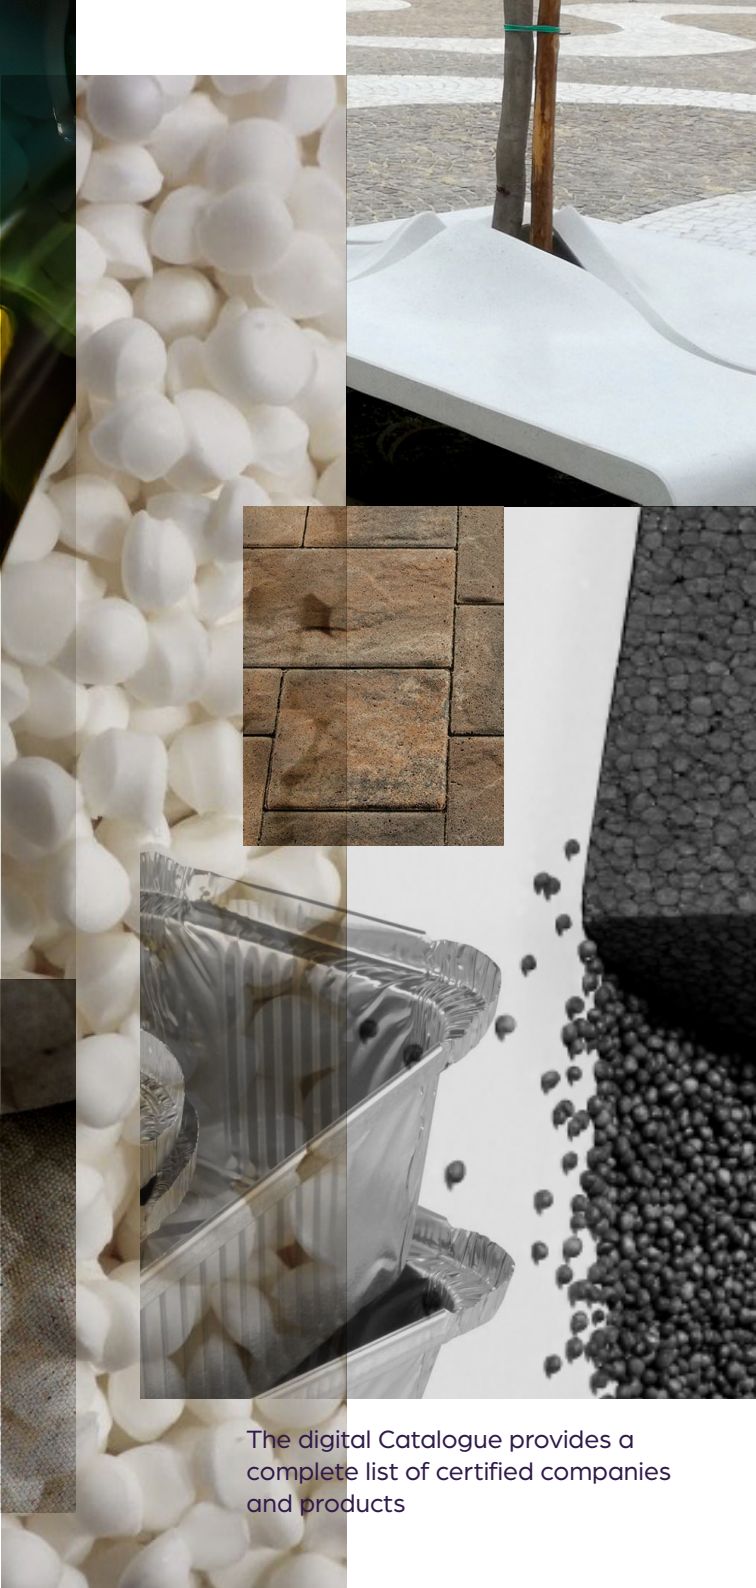

**Over 15 years
of operation as
an Association
and then as a
Foundation**

**Over 7,300 certified
products in every
production sector**

SUCCESS STORIES

**Over 7.300
certified products.**
